Intervencija

CAPABILITY STATEMENT
November 2026

You set the objective. We deliver it, and sign for it.

Intervencija delivers software objectives for a fixed monthly fee. Our AI agent teams do the engineering, and a senior architect reviews every release, signs it and answers for it. Clients set the objectives and the budget, and we ask them only for the decisions that are theirs: scope, budget or deadline changes, risks to accept, and release go-aheads when they want them.

ENGAGEMENTS

Modernisation

Move a legacy system or module to a modern platform, with the old path kept as a fallback until the new one is proven.

- A migration plan with milestones and success measures
- Signed releases with test evidence
- The old path retired once the new one is proven

Product delivery

Deliver the objectives on a product roadmap, one signed release at a time.

- Acceptance criteria agreed before work starts
- Working features in your systems
- A monthly report on progress, cost and risk

Run and maintain

Keep software, integrations and dependencies working and up to date. For organisations without a software team, we host, run and fix it.

- Security fixes and upgrades
- Monitoring, with response times agreed in the proposal
- Hosting and backups, if needed

Every release is signed by a named senior architect: acceptance criteria met, automated tests passed with evidence, security checks passed, rollback plan checked, decision recorded. New clients can start with a free System Audit of one system: a signed report with the risks, the options and a plan.

HOW WE ENGAGE

Contracting	Master services agreement with a statement of work per engagement, on our paper or yours. An NDA can be signed before anything sensitive is shared.
Reporting	Monthly report on progress, cost and risk, a decision log, and a named architect for escalation.
Security	Each client's work runs in a separate environment with its own credentials. Access agreed per scope and returned at the end. Security questionnaires are part of onboarding.
Data and AI	EU company working under the GDPR. A data processing agreement can be put in place, and we tell you which work our agents do.
Ownership	Code, tests and documentation delivered into your repositories, with ownership assigned to you.
Commercials	Fixed monthly fee per engagement. Scope changes agreed in writing. The first System Audit is free.

SELECTED CLIENTS

Banking	ABN AMRO
Fintech lending	New10
Global brands	The Coca-Cola Company and Costa Coffee, through VML

ACCOUNTABLE ARCHITECT

Zigmas Slušnys	Founder and Managing Director
